

# Omni Medium and Long Range Antenna installation

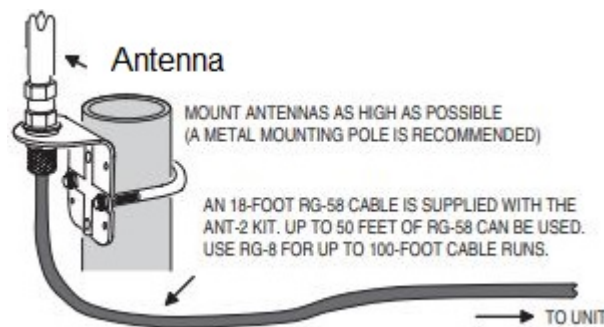

## General antenna situation

One of the most important aspects of setting up any radio antenna is its location. The location of the antenna will govern many aspects of its operation, and therefore the location of the antenna must be determined along with the type of antenna to be used.

**Choose a location where the radio antenna can "see" all around:** In order for to operate at its best it must be able to "see" all around it.

## CAUTION

When installing your antenna, Stay far away from **Power lines**, remember • **DO NOT use a metal ladder**. DO NOT work on a wet or windy day, especially during electrical storms or when there is thunder and lightning in the area. DO dress properly - wear shoes with rubber soles and heels, rubber gloves, and a long sleeve shirt or jacket.

Radio Installations shall be performed by a certified professional.
